MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Wed Nov 24 00:36:34 1999; MasPar time 19.53 Seconds 896.452 Million cell updates/sec

Description: Perfect Score: Sequence: Title: >US-09-103-287-2 (1-437) from US09103287.pep 3121

1 MTHYHFVGIKGSGMSSLAQI......GDIQKLQNAYLDKLGMKNAF 437

Scoring table: PAM 150 Gap 11

Searched:

122810 seqs, 40068593 residues

ORGANISM DATE TITLE RESULT ENTRY

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir60 1:pirl 2:pir2 3:pir3 4:pir4

Mean 50.576; Variance 122.235; scale 0.414

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61
                                                                                                                                                                                                                                                                                                      FUNCTION: CELL WALL FORMATION.

CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALF
ADP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.

PATHWAY: PEPPILOGLYCAN BIOSYNTHESIS.

SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).

SIMILARITY: BELONGS TO THE MURCDEF FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MICROBIOL. 20:339-350(1996)

FUNCTION: CELL WALL FORMATION.

CATALTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALANINE
ADP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.

PATHWAY: PEPTIDOSLYCAN BIOSYNTHESIS.

SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).

SIMILARITY: BELONGS TO THE MURCDEF FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QKYMRAY 427

Q51831;
SUBMITTED (JAN-1998) TO EMBL/GENBANK/DDBJ DATA BANKS.

-: FUNCTION: CELL WALL FORMATION (BY SIMILARITY).

-: CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALANINE
ADP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.

-!- PATHWAY: PEPTIDOGLYCAN BIOSYNTHESIS.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              entire genome and assignment of potential protein-coding r DNA RES. 3:109-136(1996).

-!- FUNCTION: CELL WALL FORMATION (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALA DP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.

-!- PATHMAY: PEPTIDOGLYCAN BIOSYNTHESIS.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).
                                                                                                                                                                                                                                                                                                                                                                                  LIGASE (EC 6.3.2.-).
